

Topic: Design Evolution - **How and why has product design changed over time?**

Introduction: What is iterative design? (Hint: 'iterative' means 'repeating')

How has product design changed over time?

Designers can collect user

(1)

to make

improvements  on existing design accordingly.

Small efforts  add up over time to create

(2)

This repeating process  creates and selects better design to fit into existing

(3)

Designers imagine  how new

(4)

can be applied to make new and better products for

(5)

It might solve  (6) that have never been solved by existing products on the market.

users

better design

problems

feedback

design context

technologies
